P a t h I n f o t e c h L i m i t e d

w w w . p a t h i n f o t e c h . c o m

To be a leading provider of integrated business solutions - helping organizations across the globe to achieve higher and higher levels of customer satisfaction.

OUR vision

“ Our Mission is to provide our customers quality solutions and services consistently and be responsive towards their needs and expectations. ”

Path Infotech is an ISO 9001:2000 certified company founded on strong core values and business ethics. It offers a wide spectrum of IT solutions and services spanning consulting to enterprise solutions and system integration to learning services. For over fifteen years, Path has successfully serviced government and private sector enterprises across industry domains such as Financial Services, Insurance, Manufacturing, BPO/ITES, and Utilities. With a global delivery model covering U.S.A, South East Asia, and India, Path operates from multiple locations across India and Singapore.

An impressive track record with over 200 enterprises worldwide has resulted in Path's superior understanding of diverse work cultures in the global market. With proven offshore and onsite global delivery capabilities, our commitment to quality is continuous and unflinching as is evident from our customer base that includes the biggest names and best brands. While striving to upgrade its portfolio continuously, Path provides unmatched value to all customers. Best practice is followed through 'Best-of-Breed' alliances, knowledge management, innovation, and environment-friendly policies.

Strategic partnerships with IT leaders including Microsoft and Oracle continue to propel Path toward new pinnacles of excellence. Numerous awards have been conferred in recognition of our technical and functional strengths, resulting in high customer retention and consistent profitability year after year.

Path has its operations, sales, and support points at multiple locations. The Corporate Headquarters in Noida, in the National Capital Region - spread over 14000 square feet has a Global Development Centre with HR, Business Development, and Training activities along with a Support Hub to provide round-the-clock customer services. The company has offices in Mumbai and Singapore to cater to full-scale operations including development, sales, and support.

corporate overview

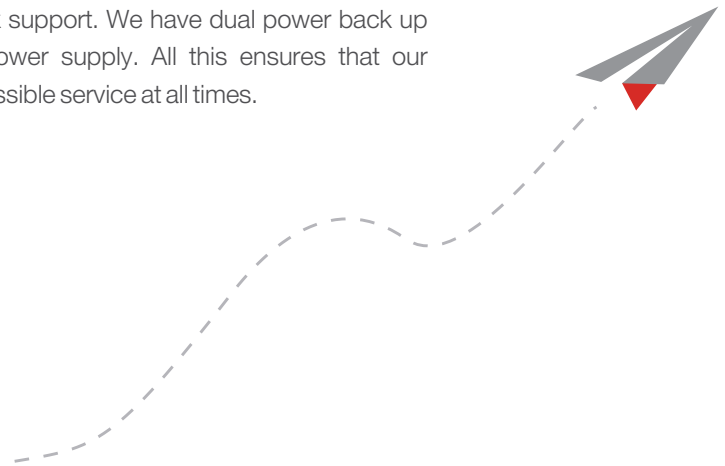

our value proposition

Over the years, we have ceaselessly assisted customers in achieving their strategic and corporate goals. We serve each of our customers with integrity and zeal. To protect and maintain their trust, we strictly adhere to regulatory and professional standards.

We actively engage with customers, understand their business, analyze their information needs, and support them to continually improve systems while making optimum use of technology and resources. Our solutions perform consistently according to their business needs and provide them a decisive competitive advantage, without ever compromising on quality. We value our customers and leverage their strengths across functional boundaries to achieve common goals.

We have robust internal channels and an internal code of conduct to guide our employees in executing goal-oriented actions. From the outset, they are encouraged to be thought leaders responsible for innovating competitive solutions within the given parameters. We love what we do and foster a high-energy, positive environment together with individual responsibility and accountability.

Our offices are fully equipped with the best infrastructure and communication facilities, including dedicated training rooms, conference and server rooms, and high security systems. Uninterrupted connectivity is ensured as we have dual lease lines and a back up line for network support. We have dual power back up apart from the normal power supply. All this ensures that our customers get the best possible service at all times.

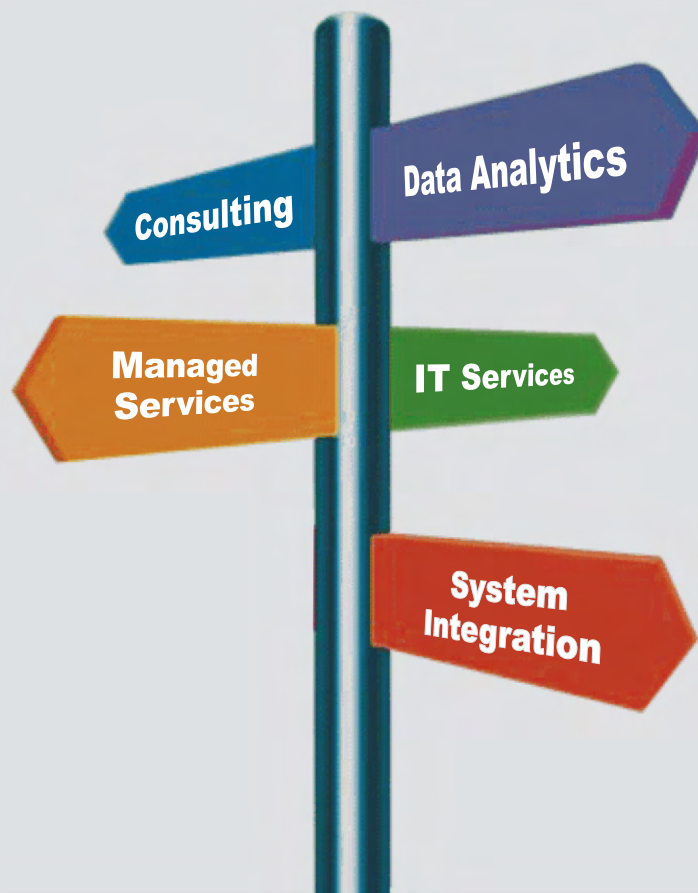

“ We aim to optimize resources for continual improvement of processes in an environment friendly manner. ”

services OVERVIEW

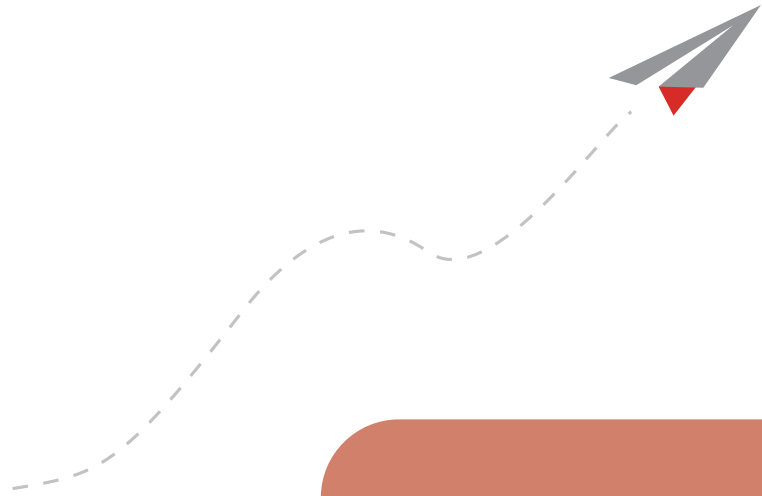

“ We provide innovative, cost-effective, end-to-end business solutions that are customized, integrated, upgradeable & scalable. ”

Our service practices covers Consulting, Data Analytics, IT Services, IT Managed Services, and System Integration.

We provide dedicated services in bespoke development and application support, database administration, implementation and support of ERP and business intelligence solutions, and license fulfillment of standard software products.

We provide both Business and Technology Consulting services. Typically, our Business Consulting practice offers solutions to both Greenfield projects and organizations coping with the constraints imposed by existing systems deployed by them. These customers consult us for enterprise process optimization, business process re-engineering, product selection, and technology finalization, either at inception or during the business life cycle, as the need arises. We take a holistic approach to devise processes that promote business effectiveness and efficiency while striving for innovation, flexibility, and integration with technology. We aim to make process orientation a strategic tool and a core competence of the organization. We help companies reconsider their processes in order to maximize customer value. We help them determine the IT strategy best suited to attaining their goals.

We have a dedicated Technical Architecture Group (TAG) that designs new applications and conducts a review of the architecture of existing systems and applications. We analyze the structure and behavior of the technology infrastructure of an enterprise, solution, or system and address issues such as performance, resilience, scalability, and availability.

Our activities include strategic measurement and analysis involving query and reporting, decision support systems and data mining; technology-enabled data warehouse design and development; custom development, maintenance and support, re-engineering and ETL design; and data management involving data migration, conversion, enhancements, and cleansing.

In today's competitive business scenario, organizations ability to enhance operational efficiency and sustain customer loyalty by prompt and well-informed decision-making is imperative for survival and growth. Data Analytics supports all decision-making tasks by collecting and collaborating facts and figures from multiple sources into instructive reports. Intelligent use of available data increases the competitive advantage of a business, but access to such information and analysis remains a big challenge.

We help customers overcome such challenges, by designing and deploying business systems that are intelligent and flexible enough to provide information on demand. We specialize in Business Intelligence (BI) based Data Analytics. We provide end-to-end BI solutions to enable our customers to make best use of information and ensure leadership in the market place.

IT services

We provide a unique range of comprehensive, fully integrated, sector-specific IT services encompassing standard enterprise solutions, bespoke application development, independent validation and testing, and learning services. Our alliances with technology leaders including Oracle and Microsoft ensure that their expertise in a wide range of market segments can be better integrated in the customers' business processes and IT landscapes.

enterprise solutions

Nowadays, enterprise applications connect and manage information flows across complex organizations, allowing managers to make decisions based on information that truly reflects the current state of their business.

To this end, we provide a wide range of services that include implementation and support of standard ERP and CRM solutions. Our enterprise solutions address standard product deployment issues such as road map creation, product evaluation, full life-cycle implementation, customization, and upgrades. Our customers derive the maximum benefit as our solutions ensure seamless information flows across the organization.

application development

Our application development skills enable customers to acquire solutions that perfectly suit their business strategies while shielding them from the technicalities of developing it themselves. We ensure that they get high quality, cost-effective solutions that simplify business processes and ensure easy functioning. We use state-of-the-art technologies that are easy to deploy, operate, and maintain thus resulting in a dramatic reduction in overheads. Our engineers are highly skilled in working on Microsoft, Oracle, Java, and other emerging technologies. We have a proven track record of developing customized software and products. We also enhance and integrate, or re-engineer these as specified by our customers. All this gives our customers a decisive competitive edge that translates into increased revenues.

independent validation & testing

Any organization that develops or deploys software; normally desires to ascertain that it will be acceptable to its end users or other stakeholders in terms of compliance and functions. Path conducts independent verification and validation of software developed and/or deployed by other vendors. This covers functional / technical testing to verify whether the software works according to specifications, performance testing to see if the software can handle large quantities of data or users, and architecture assessment to determine system design best practices.

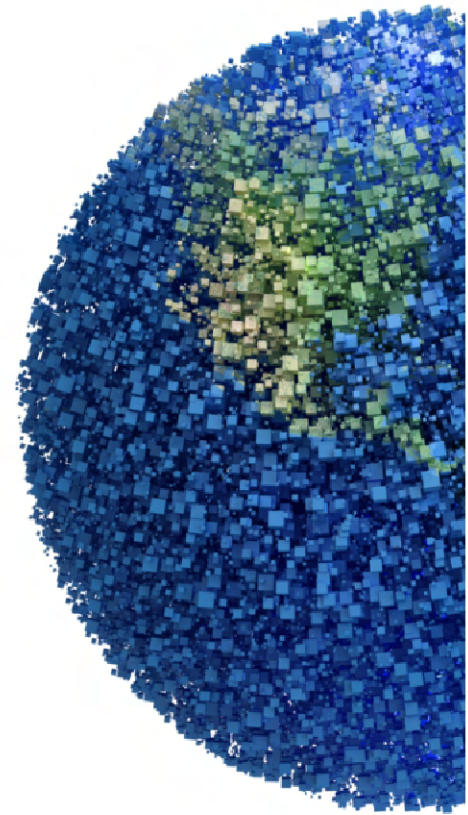

learning services

For more than a decade, we have developed and organized various need-based skill enhancement programs. Our learning services include both standard training in alliance with global IT giants like Oracle and corporate training on customized courses designed as per the organization's need, and tailored with a great degree of flexibility. We provide specialized training on databases, development tools, networking, operating systems, and information security. We are also engaged in career development activities in collaboration with academia, such as career guidance, technology seminars, and specialized skill development programs. We have earned a formidable reputation of being one of the most reliable and trusted training providers for the corporate sector.

IT managed services

Over the last decade, the globe has witnessed rapid technological change resulting in amazing changes in the way organizations function, often throwing up a whole new set of challenges. Many organizations do not prefer to utilize their time and resources to manage technology infrastructure and applications on which they rely for core functions and operations.

This is where we step in as a trusted partner to manage customers' IT infrastructure and applications, comprehensively and transparently. Third party designed and developed systems and applications can be outsourced to Path for support and maintenance. We have a time-tested, full-featured, and flexible IT management engagement model for efficient resource utilization and service improvement, which is managed by our team as per service window defined by the customer, with a commitment to meet a pre-agreed Service Level Agreement (SLA). Customers benefit as they save time and gain access to information in order to focus on aligning IT efficiency efforts with the strategic goals of the business.

infrastructure management

Organizations find infrastructure management becoming increasingly complex with each passing year. IT managers face the daunting task of balancing change in technology, security, upgrades, and application growth, with new business requirements.

We understand the business of infrastructure management and can help overcome these challenges. We provide implementation and infrastructure support covering domains like system administration, database administration, back up, and recovery. Our best practices help customers save time and money, as well as focus on key business initiatives instead of worrying about technology infrastructure management.

Path has been an undisputed leader in database administration services for more than a decade. We are experienced in designing, implementing, and managing large, complex databases on various platforms at multiple locations simultaneously. Our experts are available 24x7 to handle any situation, small or big, that the business may face in managing mission-critical databases. Multiple service models are available, such as - annual contracts, on demand, onsite, remote management and telephonic support.

application support

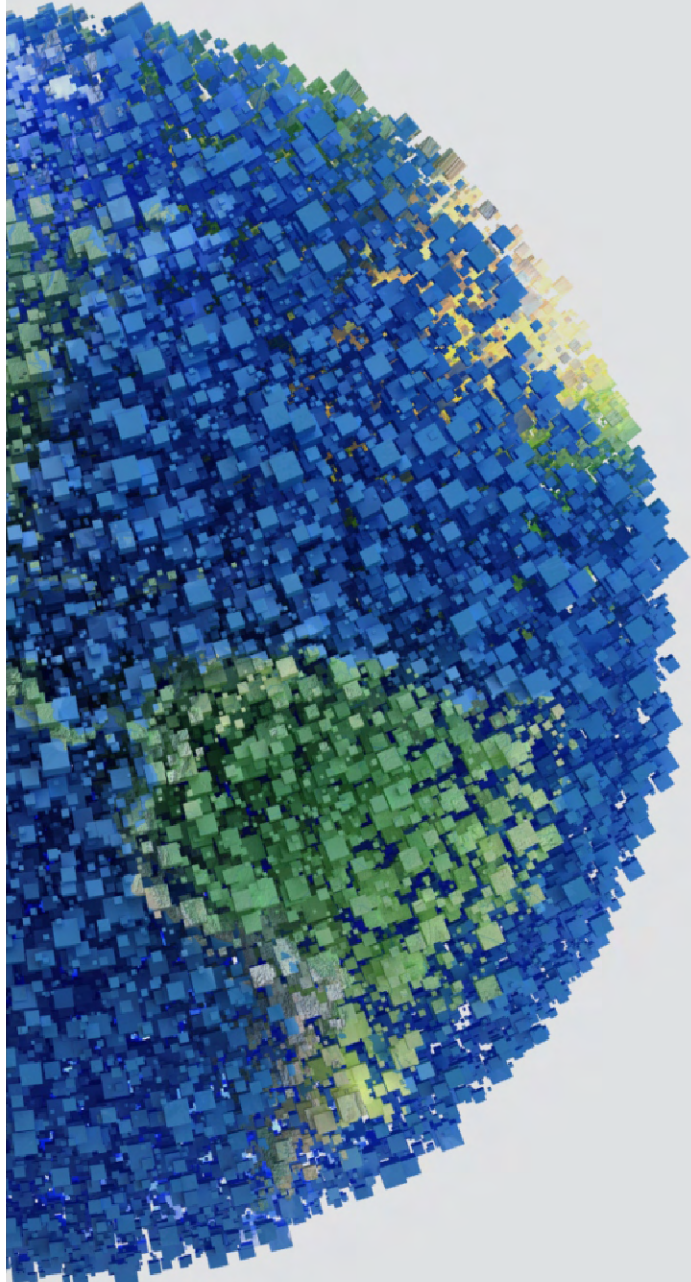

Performance of the core business application drives user productivity and customer satisfaction thereby resulting in continuous business growth. Smooth functioning of a business demands smooth functioning of business applications.

As your outsourcing partner, Path applies its expertise and best practices in application support and re-engineering to enhance the value of your business application and to help you negotiate successfully through every successive wave of change.

We provide an end-to-end application support framework covering help desk support, technical and functional support, application enhancements, performance monitoring, change and release management, and end user training. We offer a flexible engagement model, which can be onsite, offshore or a combination of both. The scope and availability of services can be tailored as per customer requirements and service level expectations.

We offer integration solutions covering the entire range: from a small office to an enterprise-wide system. We provide integration services on standard products available in the market place. Our service offerings include information security implementation; messaging, workflow and collaboration solutions; data and mail archival solutions; infrastructure solutions such as high availability and business continuity, re-engineering and integration of legacy systems. Path also enables fulfillment of standard software licenses from global vendors.

“ We support customers through IT managed services - a virtual network of experts to sustain, manage and grow with growing business needs. ”
